

VERSA-LOK BRONCO 30H

RETAINING WALL SYSTEM

NEED TO SUPERSIZE?

When you've got a project that requires a colossal-sized, heavy-duty retaining wall, call for Bronco 30H, the heavyweight segmental wall system from VERSA-LOK. Weighing in at 4,600 pounds and displaying 14 square feet of face area and a 2° batter, Bronco 30H has the heft and coverage to tackle any job. Alignment knobs molded into the top of units and channels molded into the bottom ensure correct near-vertical positioning and allow for tight joints with variable-bond construction.

The Bronco 30H system comprises six units: Bronco 30H unit, half unit, universal corner unit, cap unit and L/R corner cap units. Bronco 30H can be used for walls up to 10 feet tall without soil reinforcement, making it ideal for projects with excavation constraints. It easily accommodates geogrid, such as VERSA-Grid, for taller walls. With near-vertical construction, variable bond and a minimum radius of 17 feet, Bronco 30H is a versatile and attractive random-pattern large-block SRW system. After installation, the natural stone appearance of the Bronco 30H wall face can be enhanced with stain to blend into the natural environment.
